

**A Research Study Presented to the Faculty of
CABANATUAN CITY SENIOR HIGH SCHOOL**

Sta. Arcadia, Cabanatuan City

**In Partial Fulfillment of the Requirements
for the Subject Capstone**

**EASYWIZ: UTILIZATION AND IMPLEMENTATION OF RFID AND ARDUINO
TECHNOLOGY AS LOCK ACCESS SYSTEM AND MACHINE LEARNING
MODELS AS FACE RECOGNITION-BASED ATTENDANCE AND SECURITY
SYSTEM**

James Aaron Erang

Researchers

Jessmia Cacatian

Project Adviser

June 2022

ACKNOWLEDGEMENTS

First and foremost, praises and utmost gratitude to the Almighty God for His showers of blessings all throughout the study to finish it successfully and for being with us along the way.

We would like to thank all the assistance and presence of people who are with us until completion of the study.

This study and the research behind it would not have been possible without the exceptional support of our Capstone teacher, Jessmia A. Cacatian, whose direction, encouragement, and sharing of information has inspired us to pursue this study. We would like to thank her for her invaluable supervision throughout the whole study process, from addressing all of our questions to finalizing the manuscript.

Finally, we would like to extend our gratitude to our family, relatives, and friends who supported us financially, morally, and emotionally, as well as for their motivation and sharing of knowledge toward our research project.

We will not be able to succeed without everyone's assistance.

List of Figures

Figure No.	Description	Page
1	Electron-electron interaction as shown by Feynman's diagram.	3
2	A simple model of a neural network.	11
3	A simple structure of Radial Basis Function Neural Networks (RBFNN).	12
4	Conceptual framework of the study.	18
5	RFID and Arduino-based lock access system algorithm.	21
6	Algorithm of face recognition-based attendance checking and security system.	22
7	Comparison of encoded frame against encoded references in array.	24
8	Unlock and lock times of RFID and Arduino-based lock access systems.	26
9	Comparison of average mean and distribution of time trials from 411 trials including random faces. (a.) and (b.) Presents the data of equal size (N) of array and (c.) and (d.) Presents the data of the whole array.	27
10	Time trials of face recognition-based attendance checking and security systems.	31
11	Time distribution of trials.	32

12	Regression model of prices of Arduino from fluctuations of price from March 03, 2021 to May 17, 2022.	34
13	Regression of prices in timeframes of: 12 months, 36 months, and 60 months.	35
